web development, one drop at a time

django

luizalabs

Alguns motivos que me fizeram gostar do MongoDB

- Muito rápido de se desenvolver qualquer coisa!!
  - Linguagem simples!

- Schemaless – ótimo para lidar com dados não estruturados
  - Livros que possuem N autores e autores que possuem N livros
  - Categorias que possuem mais categorias
  - “Nuvem” de tags em tópicos de um blog

- Escalável – ReplicaSets/Shards!

- GridFS – armazene arquivos grandes!

Instalando MongoDB

- Doc oficial:

- **http://docs.mongodb.org/manual/installation/**
- **https://docs.docker.com/examples/mongodb/**

- Minha doc:

```
# docker pull mongo
# docker run -t -i -p 27017:27017 -v /data_mongodb/db:/data/db  mongo /bin/bash
```

- `-t -i`: opções para mostrar o que está rolando
- `-p 27017:27017`: portas local:container
- `-v /data_mongodb/db:/data/db`: diretório "local" : diretório container
- `mongo`: image
- `/bin/bash`

```
# mongod &
```

Instalando Pymongo

- **Doc oficial:**

- **http://api.mongodb.org/python/current/installation.html**

- **Minha doc:**

```
$ mkvirtualenv -p /usr/bin/python3.4 grupymongo
(grupymongo)$ pip install pymongo
```

Ops... mudando o título da LT...

Como aprender Pymongo no World of Warcraft!??

Console mongo/pymongo

```python
import pymongo
# establishing connection
connection = pymongo.MongoClient("mongodb://localhost")
# selecting on database
db = connection.wow
# selecting collection
ah_items = db.ah_items
import ipdb
ipdb.set_trace()

# On Python:
# ipdb> ah_items.count()
# 41143
# ipdb> ah_items.count({'good_gem': True})
# 87
# ipdb> ah_items.count({'good_gem': {"$ne": True}})
# 41056

# On MongoDB:
# > db.ah_items.count()
# 41143
# > db.ah_items.find({good_gem: true}).count()
# 87
# > db.ah_items.find({good_gem: {$ne: true} }).count()
# 41056

```

delete_many

```
1  import pymongo
2
3  # establishing connection
4  connection = pymongo.MongoClient("mongodb://localhost")
5  # selecting on database
6  db = connection.wow
7  # selecting collection
8  ah_items = db.ah_items
9
10 # update all the docs
11 from time import time
12 start = time()
13 result = ah_items.delete_many({'good_gem': {"$ne": True}})
14 print("Finish: ", time() - start)
15 print("Deleted count: ", result.deleted_count)
16
```

delete_many

```python
import pymongo

# establishing connection
connection = pymongo.MongoClient("mongodb:/
# selecting on database
db = connection.wow
# selecting collection
ah_items = db.ah_items

# update all the docs
from time import time
start = time()
result = ah_items.delete_many({'good_gem': {"$ne": True}})
print("Finish: ", time() - start)
print("Deleted count: ", result.deleted_count)

```

 # Saída do script

$ python delete_many.py
Finish: 0.17556357383728027
Deleted count: 41056
